Summary

Full-stack software engineer with 2+ years of experience, currently focused on payment systems. At Bestfy, a payment gateway that has processed R$47M+, I build checkout, 3DS2, distributed sessions and job queues on NestJS, PostgreSQL and AWS. Founder and sole engineer of DiligensAI, an AI SaaS written in Go with an LLM agent and tool calling. I also build concurrent systems in Elixir/OTP and real-time media with WebRTC.

Experience

Bestfy — Payment Gateway (Fintech) Apr 2026 – Present
Full-Stack Developer *Balneário Camboriú, SC, Brazil*

- Delivered core parts of the public Checkout and the order bump, now one of the platform's primary revenue drivers.
- Built abandoned-cart recovery on a real-time session that alerts the merchant when a buyer drops off.
- Implemented 3D Secure (3DS2) with backend-enforced validation, reducing fraud and chargeback risk.
- Moved emails and pixel events off the request path into BullMQ queues with idempotent retries.
- Designed Redis sessions across scaled instances and solved concurrency with PostgreSQL advisory locks.
- Eliminated N+1 queries with a single batched SQL query, cutting a critical process from 12s to 3.5s.
- Proactively found and fixed serious security gaps: missing CSRF protection, session cookies without HttpOnly/SameSite, and bot-exposed endpoints (Turnstile).

Pináculo Digital Jun 2024 – Apr 2026
Full-Stack Developer (promoted from Trainee, Sep 2024) *Fortaleza, CE, Brazil*

- Built video calling for an internal communication platform: an SFU in Go (Pion), WebSocket signaling and per-subscriber simulcast, replacing a P2P mesh that degraded beyond 3 participants.
- Cut a production search query from 9s to 1.2s via indexing and query-plan analysis, guided by Grafana/Prometheus.
- Shipped NestJS, React and SvelteKit apps with Prisma plus a web-scraping microservice; led code reviews.

Calang.io — Junior Enterprise (student-run software company) Mar 2025 – Dec 2025
Backend Tech Lead (concurrent with the role above) *Juazeiro do Norte, CE, Brazil*

- Led a junior development team with regular code reviews and a Kanban workflow.

Projects

DiligensAI | *Go, PostgreSQL, Redis, RabbitMQ, SvelteKit, LLM* | app.diligensai.com.br 2026

- AI assistant SaaS (beta) built solo from infra to SDK: Go API, RabbitMQ worker with DLQ, Svelte admin panel and embeddable SDK.
- LLM agent with tool calling generated from the client's OpenAPI docs; router hits 97% accuracy on evals.
- PII encrypted with AES-256-GCM (LGPD), blue/green deploys via GitHub Actions, OpenTelemetry, 335 Go tests.

W-Core — Real-Time State Engine | *Elixir, OTP, ETS, Phoenix LiveView, SQLite* 2026

- Industrial telemetry: a GenServer writes to ETS while a supervised worker does batched write-behind into SQLite.
- Tested with 10,000 concurrent events, no event loss and no race conditions.

Academic RAG Assistant | *Go, pgvector, embeddings, SvelteKit* | dalton02/UFCA-ChatBot 2026

Technical Skills

Programming Languages: TypeScript, JavaScript, Go (Golang), Elixir (OTP), SQL
Backend: Node.js, NestJS, Express, Gin, REST APIs, WebSockets, SSE, WebRTC, Microservices, OAuth2
Frontend: React, Svelte/SvelteKit, Phoenix LiveView, Tailwind CSS, HTML/CSS
Data & Messaging: PostgreSQL, Redis, Prisma, sqlc, pgvector, RabbitMQ, BullMQ
AI & LLM: LLM Agents, Tool Calling, Anthropic API, RAG, Embeddings, Evals
Testing & Observability: Jest, Cypress, Go testing, Sentry, Grafana, Prometheus, OpenTelemetry
Cloud & DevOps: AWS (EC2, S3, Amplify), Docker, GitHub Actions (CI/CD), Nginx, Cloudflare, Linux
Spoken Languages: English (professional working proficiency), Portuguese (native)

Education

Universidade Federal do Cariri (UFCA) Sep 2021 – Aug 2026
Bachelor of Science in Computer Science *Juazeiro do Norte, CE, Brazil*
